Bio-identical Hormone Replacement Therapy offers tremendous benefits to the peri, menopausal, and post menopausal woman. Some of these benefits include:

- **Decreased risk of Heart disease**, which is the cause of death of 1 in 7 pre-menopausal women and 1 in 3 post menopausal women.
- **Improved Brain/ Mental function**– **Decreases your risk of Alzheimer’s disease**, depression, anxiety, fatigue, and ‘brain fog’.
- **Improved Bone Health**– **Decreases your risk of osteopenia and osteoporosis**. Bioidentical Hormone Therapy can actually increase your bone density by up to 8.5% annually.
- **Increased libido/sexual function**– This is true for women as well as men. Hormone therapy can make you more interested in having a healthy, happy sex life, which has been proven to be a positive benefit for an individual’s overall well being. It can improve vaginal and urinary health by reducing risk of urinary tract infections associated with vulvovaginal atrophy.
